## Typical Analysis

These results are indicative, not fixed and contractual.

Dry Matter	Crude Protein	Oil A	Oil B	Crude Fibre	NDF	Lysine	Starch	Sugar	Ash
88.5	47.0	1.7	2.6	4.3	8.8	2.91	3.6	9.0	6.3

Figures are shown as %.

### Additional Information

The cracking, heating and flaking of soya beans produces dehulled soya bean meal. Once flaked, the soya beans undergo a solvent extraction to reduce the oil content to 1-2%. The spent flakes are then toasted and ground into a meal.

### Quality Assurance

Any origin soya bean meal is sourced solely from approved suppliers and is sold by Noble Foods Straights, a UFAS accredited merchant. A full QC of our internal, Noble analytical information is available on request.
